-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gathmann ('994). Gathmann ('994) both teach a method of fabricating a lens system by cutting apart a lens to form  $2n$  pie-shaped segments where  $n$  is an integer (in the case of Fig. 1, is six) and reassembling the  $2n$  pie-shaped segments to form a lens system with  $n$  of the  $2n$  pie-shaped segments being located above a common plane and the rest of the  $2n$  pie-shaped elements being located below the common plane (see Fig. 2). The pie-shaped segments are identically shaped as shown in Fig. 1. Gathmann ('994) does not specifically teach that the method of fabrication can be utilized in a catadioptric system or that  $n$  can equal either one or two. However, it would have been obvious to one of ordinary skill in the art to provide the methodology of Gathmann in a catadioptric system, since it is known to provide this method of fabrication in a purely refractive system.

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Japan 61067002 is cited to show another alternative of cutting up an optical element and reassembling it.
